## **Fungus (1–3)– $\beta$ –D–Glucan Test (Chromogenic Method)**

Recommended by the EORTC/MSG Consensus Group  
ERA BIOLOGY, joint National Center for Clinical Laboratories etc., successfully  
drafted the industry standard of "Fungus (1-3)- $\beta$ -D-Glucan Test" in 2017.

### **Intended Use**

Screening and Diagnosis for Invasive Fungal Infection

### **Advantage**

- Quality control ensure the experimental accuracy
- High negative predictive value 97.73%
- 5-8 days prior to clinical symptoms and imaging

## Overview

Fungus (1-3) - $\beta$ -D-Glucan (BG) is a unique element of fungal cell wall, when the fungus invades blood or deep tissue, BG can be released from the cell wall.

Fungus (1-3)- $\beta$ -D-Glucan Test (Chromogenic Method) is used for screening and diagnosis for invasive fungal infection by quantitative detection of the Fungus (1-3) - $\beta$ -D-Glucan content in human serum or BAL fluid sample.

## Product Characteristics

Name	Fungus (1-3)-β-D-Glucan Test (Chromogenic Method)				
Model	GCT-110T	GKT-25M	GKT-12M	GKT-10M	GKT-5M
Specification	110 Tests/Kit	50 Tests/Kit	50 Tests/Kit	36 Tests/Kit	30 Tests/Kit
Instrument	Microplate Reader	Kinetic Tube Reader MB-80/ IGL-800		Kinetic Tube Reader MB-80/IGL-200	
Detect Duration	40min	60min			
Method	Chromogenic method				
Sample	Serum/BAL fluid				
Linear Range	31.25-500pg/ml				
Inter Assay Variation	≤10%				

## Interpretation of Result

	Serum	BAL fluid
Negative	< 60pg/ml	< 400pg/ml
Indeterminate	60-79pg/ml	400-449pg/ml
Positive	$\geq 80$ pg/ml	$\geq 450$ pg/ml

## Applicable Department

Respiration Department

ICU

Infectious Department

Dermatology Department

Hematology Department

Cancer Department

Transplantation Department

Neonatology Department
